

# PARASITE PREVENTION

There are many products available on the market that claim to treat for various parasites such as flea, ticks and intestinal worms. **We recommend only using products prescribed by your veterinarian.**

We are able to advise you as to which product will best suit your pet's individual needs. Some "over the counter products" are either ineffective or are too harsh (especially for cats). We carry a variety of products that are safe, cost effective and guaranteed by the manufacturer when used properly. We currently recommend using **Nexgard** or **Nexgard Spectra** for safe, effective and comprehensive parasite control.

**NexGard™**  
(afoxolaner) Chewables

**Effective flea and tick control in a once a month chew**

**NexGard SPECTRA™**  
(afoxolaner and milbemycin)

**Effective flea, tick, heart worm and intestinal worm control in a once a month chew**

Flexible dosing for dogs of all ages and sizes.

**CHEW ON THIS.**

Easy to give.

A tasty beef-flavoured soft chew that dogs love.

Easy to remember.

A once-monthly treatment routine that pet owners prefer.

**Parasite prevention for your pet is not only important for their health but for your entire family as well.** Some parasites which infect pets can pose a "Zoonotic Risk" - which means that:

- 1.) They can in some cases be associated with serious illness or disease in people.
- 2.) Young children, the elderly and people with compromised immune systems are at the greatest risk.

**Treating your pet with an effective parasite preventive on a regular basis can help to minimize the risks for everyone.**
